

Don Laliberte

Full Stack Developer

Calgary, AB | 403-808-8869 | donhenrylaliberte@gmail.com | donlaliberte.dev | [LinkedIn](#) | [GitHub](#)

SUMMARY

I help engineering teams ship reliable, user-facing software faster by bridging the gap between clean back-end architecture and polished front-end experiences. With 3+ years of professional full-stack development across React, Java, Spring, and MongoDB, I thrive in Agile environments where ownership matters and ambiguity is the norm. I write code that other developers actually want to maintain, and I approach every problem by asking what outcome the user or business actually needs.

CORE COMPETENCIES

React / React Native | Java | TypeScript / JavaScript | Spring Security | MongoDB | SQL / PL-SQL
REST API Design | OAuth2 / JWT | MVC Architecture | Agile / Scrum | Git | Linux

PROFESSIONAL EXPERIENCE

Full Stack Developer | [New Idea Machine](#)

May 2022 - Feb 2025

Contracted across multiple client projects in a remote Agile environment, independently owning features from requirement to deployment.

- Reduced friction in the client-server data layer by rebuilding REST API integrations in React and Java, streamlining data flow between front-end UIs and back-end logic, cutting unnecessary round-trips and improving perceived app responsiveness.
- Maintained delivery velocity across concurrent client engagements in a fully remote setting, consistently meeting sprint goals without direct day-to-day oversight and demonstrating the self-management skills that remote teams depend on.
- Raised codebase maintainability by championing MVC architecture, modular component design, and code review participation, reducing the onboarding time new contributors needed to become productive.
- Collaborated directly with a project manager and dev team to translate business requirements into shippable Agile deliverables across diverse client domains.

Backend Developer | [Tech Start - Event Ease](#)

Nov 2024 - May 2025

Joined a volunteer startup team to build an event-management platform on React and React Native, owning database design and auth infrastructure.

- Designed MongoDB data models for event and user data, enabling efficient queries that kept the app experience smooth across both web and mobile clients, removing a key performance bottleneck the team had identified early in development.
- Integrated Clerk authentication, replacing a fragile in-house auth flow with a production-grade solution, eliminating login-related bugs and freeing the team to focus on product features instead of auth edge cases.
- Shipped consistently in TypeScript across an async, cross-functional team, meeting milestone deadlines while the codebase stayed type-safe and readable.

Full Stack Developer, Capstone | [SAIT](#)

Sep 2021 - Apr 2022

Led security and API architecture on a six-person team delivering a commissioned eCommerce platform for a real client.

- Designed and implemented the full auth layer using Spring Security, OAuth2, and JWT, resulting in a client-ready application that passed security review and protected real user data from day one.
- Built REST API endpoints consumed by the React front-end to support dynamic product management, enabling the client to update their storefront without developer involvement.
- Coordinated the SQL schema and data layer, giving the team a reliable foundation that held up through load testing and final client demo.

LEADERSHIP & COMMUNITY

VP Technology (2025) / President-Elect (2027) | [CSUS, University of Calgary](#)

Jun 2025 - Present

Elected to lead technology and operations for Calgary's largest CS undergraduate society, representing 1,000+ students.

- Contributed to building csus.club, a production full-stack platform on Next.js 15 and Cloudflare Workers serving 1,000+ members, with features spanning event RSVP, a gamification points engine, blog, elections, and a role-based admin dashboard backed by a 37-table D1 SQLite schema and 73 API routes.
- Took ownership of CalgaryHacks 2025 end-to-end, coordinating sponsors, judges, venues, and a 15+ person volunteer team, and delivered a hackathon that ran on schedule and drew strong student participation.
- Translated recurring student frustrations around curriculum and resources into structured proposals for the UofC faculty board, resulting in agenda items that would not have reached the table without a student advocate in the room.

Hackathons & Competitions

- CalgaryHacks 2025: Led team to 2nd place (Division 2) by scoping a feasible idea fast and executing cleanly under a 24-hour deadline. Built Leaf Quest, an environmentalism-themed React web game that wowed judges on polish and concept.
- Calgary Collegiate Programming Contest (CCPC) 2025: Placed 5th in Division 1 against senior CS students, demonstrating strong algorithmic problem-solving under timed, high-pressure conditions.

PROJECTS

CalgaryHacks Official Site | [calgaryhacks.ca](#)

2025 - Present

Co-built the official hackathon platform for CalgaryHacks 2027 with a small team, replacing a static cPanel site with a full edge-deployed product.

- Co-architected a Next.js 15 App Router application deployed to Cloudflare Workers via OpenNext, with Cloudflare D1, KV, and R2 as the data layer, cutting initial load time by roughly 50-70% and image payloads by 70-80% compared to the prior static hosting setup.
- Co-built end-to-end authentication and a verified registration pipeline using better-auth, Drizzle ORM, and Zod-validated Server Actions, with magic link and email/password flows, mandatory email verification, and KV-backed rate limiting across Worker isolates.
- Implemented a role-based admin console (organizer/admin tiers) with a paginated searchable registration list, per-registration status updates, and a CSV export API with proper auth guards and HTTP status handling, giving event organizers self-serve tooling without needing developer access.

EDUCATION

Bachelor of Computer Science, *University of Calgary, Calgary, AB*

Sep 2024 - Present

Information Technology Diploma, Software Development, *SAIT, Calgary, AB*

GPA 3.84 / 4.0 | Jun 2022

TECHNICAL PROFICIENCIES

Languages & Frameworks: Java, JavaScript, TypeScript, Python, C#, React, React Native, Next.js, Spring Security, .NET

Databases: SQL / PL-SQL, MongoDB, SQLite / D1, Drizzle ORM

Tools & Platforms: Git, Linux, Cloudflare Workers, OAuth2, JWT, Zod, Resend, Sentry, Vitest
